K Hemanth Kumar

BI Platform Administrator | Tableau and Fabric Administrator

+91 76589 96272 | heemanth.tableau@gmail.com

Professional Summary

Experienced and results-driven **BI Platform Administrator** with **5 years of hands-on experience** managing **enterprise Tableau Server platforms** across **Dev, UAT, and Production (Internal & External)** environments. Proven ability to automate BI platform operations using **Tabcmd, TSM CLI, Python, and REST APIs**. Strong expertise in designing and supporting **highly available, secure BI architectures** using **HA clusters, Load Balancers, SSL, SAML, and Active Directory (AD)**. Adept at **performance tuning, disaster recovery planning, change-controlled deployments, and proactive monitoring**, consistently ensuring **~99.9% platform uptime**. **MS certified**, with **foundational exposure to Power BI and Microsoft Fabric**, including gateway configuration and semantic model refresh support. Recognized for cross-functional collaboration, production support ownership, and delivering stable analytics platforms.

Technical Skills

BI Tools: Tableau Desktop, Tableau Prep, Tableau Server, Tableau cloud, Power BI Desktop & Service, MS Fabric, Cognos administration and Databricks

Server Admin: Installation, HA Setup, SSL/SAML/AD Integration, Scheduling, Subscriptions, Alerts, Monitoring

Visualization: Dashboard Design, Data Blending, Data modeling, RLS, LOD Expressions, M language, Power Query, DAX and Parameterization.

Data Sources: Oracle, SQL Server, Excel, SAS and lakh house

Scripting & Automation: Tabcmd, TSM CLI, batch script, Python (basic), REST API (basic)

OS/Cloud: Windows Server, Azure

PROFESSIONAL EXPERIENCE

BI Platform Administrator | Cognizant Technology Solutions – Hyderabad

Client: EmblemHealth, New York | July 2021 – Present

Tableau Server Administrator

- Administered enterprise **Tableau Server (2021.x+)** across Dev, UAT, and Production (Internal & External) environments.

- Deployed and Maintained **High Availability** Tableau Server clusters with **F5 Load Balancer** ensuring platform stability and 99 % uptime.
- Led multiple **Tableau Server upgrades and patching activities**, ensuring minimal user disruption and zero rollback incidents.
- Automated ~60% of routine administrative tasks using **Tabcmd, SailPoint, Python, and REST APIs**, saving ~10 hours per week.
- Implemented SSL certificates, **SAML-based SSO** for external users, and **Active Directory (AD)** authentication for internal users.
- Managed **users, groups, roles, permissions, and site content** in alignment with enterprise data governance and security standards.
- Implemented **row-level security (RLS)** for external production users using user filters and **group-based** access controls.
- Created and maintained **extract refresh schedules**, ensuring timely and reliable data availability.
- Configured **subscriptions and data-driven alerts** to deliver automated dashboard snapshots to stakeholders.
- Monitored Tableau Server health using **TSM and Admin Views**, proactively resolving backgrounder and extract failures.
- Handled incident, service, and change requests through the **SCCD** ticketing system, consistently meeting **SLA** targets.
- Built internal Tableau admin dashboards using the **PostgreSQL** repository to track user activity, content usage, and login trends.
- Designed and published interactive Tableau dashboards using **Oracle, SQL Server, Excel, and SAS** data sources.
- Optimized **dashboard performance** by reducing quick filters, leveraging extracts, and following best practices.
- Delivered training sessions and walkthroughs for **business users**, improving adoption and **self-service BI usage**.
- Managed **Tableau Server licensing**, including role-based license assignment, activation, renewal, and audits.
- Performed regular **Tableau Server log cleanup** and housekeeping, including automated log rotation and cleanup scripts to manage disk usage.
- Scheduled and monitored weekly full **Tableau content backups**, ensuring secure recovery of workbooks, data sources, and metadata.
- Raised and managed **Tableau vendor support cases**, working with Tableau Support to troubleshoot product issues and apply fixes.

Power BI & Microsoft Fabric Administration

- Administered Microsoft Fabric & Power BI Service across **Dev, Test, and Prod** environments as part of enterprise migration initiatives.
- Managed Fabric assets (**Lakehouse, Pipelines, Notebooks, Warehouses, Semantic Models**) and governed workspaces with **RBAC & RLS**.
- Managed and optimized **Fabric capacity utilization**, monitoring workloads and improving performance across enterprise workspaces.
- Configured and maintained **On-Premises Data Gateway** for secure hybrid data connectivity.
- Monitored and supported **Power BI semantic model refreshes**, resolving refresh failures and validating schedules.
- Managed and monitored **Fabric capacity and usage activities**, across all available workspaces.
- Managed **Power BI CI/CD pipelines** and post-production validation activities.

Cognos Analytics Administration

- Supported Cognos Analytics administration, including **user access, roles, capabilities, DS connections, upgrades and security** configuration.
- Supported production issues, **refresh job failures, content backups, patching and CR-based deployments** in Cognos environments.

Education

Bachelor of Technology (B. Tech) – Electronics & Communication Engineering
Sri Mittapalli College of Engineering (JNTUK), 2017

Achievements

- Reduced Tableau Server downtime by **30%** through proactive monitoring and preventive maintenance.
- Improved Power BI dataset refresh success rate from **82% to 97%**.
- Built internal admin dashboards for tableau to **monitor user traffic, workbook usage**, and login trends.

CERTIFICATION

- **Microsoft Certified: AZ-900, DP-600, DP-700 and PL-300**
- **Databricks Certified Data Engineer Associate**
